Hassan Raza

Introduction

The Book Shop Management System is a console-based application developed using **C++ and MySQL** for Windows.
It automates book shop operations such as **employee and member management**, ensuring efficient record storage, quick retrieval, and reduced manual work

Problem Statement

Manual book shop management is **slow, time-consuming, and error-prone**. There is a need for an **automated system** that can handle records quickly and accurately while reducing human errors

Objectives

Automate record management

Reduce manual work

Manage employees and members efficiently

Enable fast searching and updating of records

Maintain persistent database storage

Key Features

- Employee management
- Member registration
- Record search and update
- Manager assignment
- Salary updates

Database Design

EMPLOYEES TABLE

MEMBERS TABLE

MANAGERS TABLE

PRIMARY KEY RELATIONSHIPS TO MAINTAIN DATA INTEGRITY

Advantages

- Fast and efficient system
- Windows compatible
- Easy to maintain
- Scalable structure for future expansion

Conclusion

The Book Shop Management System provides an efficient solution to traditional manual management methods.
By using C++ and MySQL, it ensures **accuracy, speed, and reliability**, making book shop operations easier and more organized

THANK YOU
